

NEW for 2008!

We can put together a complete system—Toolbar (Ag Systems or DMI), NH3 system, GPS guidance

Example system. All sizes of systems available.

At Kelley Engineering, we have over 60 years of combined experience with spray and NH3 application systems and we use these systems on our own farm.

We back up our systems with:

- ✓ Free phone support
- ✓ Parts that are in stock
- ✓ On your farm service
- ✓ Component swap to keep you running¹
- ✓ Component testing to pinpoint problems
- ✓ Heat exchanger maintenance
- ✓ Pump rebuilds
- ✓ Spray nozzle testing
- ✓ Fabrication and modifications

Call for pricing and details

Shown above are the:

- Hiniker 8605 controller - GPS compatible
 - Heat exchanger with orifices installed
 - Flow meter, stainless steel
 - Servo with stepper motor
 - Run/Hold proximity sensor on 20' cable
 - Battery cable for 8605 controller
 - Radar interface²
 - Hydraulic shut-off valve
 - 16 hole aluminum manifold
 - Mole liquid/vapor knife (Qty: 2)
 - 1-1/4" bolt-on hose clamps (Qty: 2)
 - 10' Run/Hold cable
 - 1-1/4" filter
 - 6' of NH3 hose
- ✓ Not shown above, but included with the complete system³ are the hydraulic hoses and fittings for the shut-off valve.
- ✓ *All of our systems (Hiniker and Raven) contain 2 unions which allow for easier servicing and repair.*

¹ - Repair or replacement charges may apply. Ask for details.

² - The model of interface depends upon the model of radar gun or GPS speed sensor on the tractor. Radar guns and GPS speed sensors are available as an add-on or the system can be setup with a wheel speed sensor. The radar and GPS speed sensor systems are recommended. If the tractor doesn't have a speed sensor, Hiniker has a GPS speed sensor / interface combo that is the most cost effective add-on solution.

³ - An additional boom cable kit is required to use the controller, flow meter and servo on a planter and/or sprayer.

Kelley Engineering is your one stop for all of the following suppliers; ...

... and if we don't have it, we can get it!
