

SMS Advanced v6.0

Are you looking for conclusions, recommendations, and answers from precision ag data? Ag Leader's SMS Advanced is the tool you've been looking for! Such innovation has never before been seen at such an economical price!

Batch Command Utility will give you the power to complete a function across large amounts of data, effortlessly. You have the option to batch print an unlimited number of fields to an image file, to the printer or to save it as a PDF. This batch functionality will certainly make your operation more efficient.

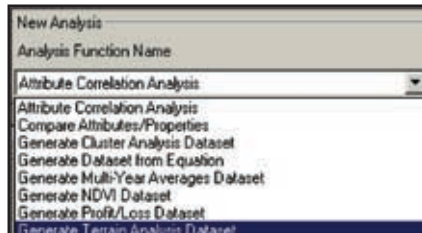

Soil Lab Files can be read into SMS efficiently. Txt, csv, or dbf are all supported in the soil import wizard. Save the soil lab's format as a template for increased use next time soil lab information is collected.

Project Feature will help manage multiple growers. Helping keep data organized & as a complete "warehouse" of information. In addition, estimated download time, project size and a project history option is available to help view the interaction with each project.

Multi-Project Analysis can be operated to find averages across different growers data. Use this feature to find yield by fertility levels across all growers.

Analysis Tools are abundant in SMS Advanced. All analysis functions of SMS Advanced operate in a wizard mode to provide clear guidance to run an analysis function properly. All analysis functions can also be run in batch mode and performed across multiple datasets and multiple projects (growers).

Equation Writer to create prescriptions across many fields or write prescriptions for removal rates. SMS Advanced will

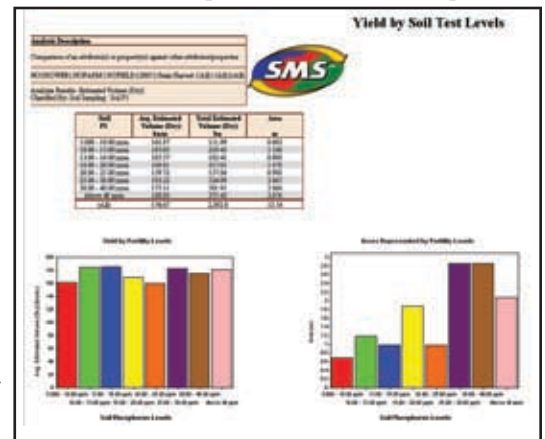

quickly and easily crunch the numbers to give you the results you are looking for.

Network your Installations so different users can be operating in different projects simultaneously. Also, while using the network installation, you can "check in" or "check out" specific projects for use away from the network, (i.e. at a customer's home or at your home office).

Advanced is seamless with SMS Basic. Ability to export a grower's data out of SMS Advanced into the grower's own copy of SMS Basic.

Compare Attribute/Properties to compare & find relationships

between any attributes or properties. For example: finding yield levels by soil test levels, yields by planting speeds, yield by elevation, yield by hybrid by soil types or management zones.

Multi-Year Averaging can be used to average many years of yield data, to then create management zones. Multi-Year Averaging will also generate a "stability" map showing the variation of the yields throughout the averaged years.

Booklet Printing is an optional module allowing you to build/save/print booklets that can contain a cover page, table of contents, reports, charts, analysis results and map layouts. All of the outputs that you include in the booklet print/save as one output, creating all the necessary maps and reports that are needed. That means your computer does the work, not you. Unique booklets can be saved (by customer, for example) so that all outputs are customized to a specific need. View our "Booklet Printing" fact sheet for more details.

Backup Scheduling. No need to worry about remembering to manually create backups of your data. Simply choose daily, weekly or a monthly backup and the specific time you want your backup to take place and all your data will be stored in a backup file. This backup file contains all the data and organization within your SMS Software.

SMS Advanced v6.0

Key Features of SMS Advanced

- ▶ All the Features of SMS Basic
- ▶ Calendar View for exploring your data when you actually collected it.
- ▶ Batch Functions such as map printing, exporting and importing data, reprocessing data, creation of split planter data, analysis functions.
- ▶ Ability to Automatically Download Satellite images based on fields, city & state, or latitude & longitude
- ▶ Integrated 3D Terrain View and 3D Data Plotting
- ▶ Design and edit your own reports, charts, analysis results and map printouts.
- ▶ Project Storage scheme for handling multiple clients easier.
- ▶ Support for installing on and working across a computer network.
- ▶ Comparison Analysis function to compare different types of data such as yield and moisture by soil type for all your fields & across multiple projects.
- ▶ Equation Writer analysis function that lets you create data that provides the answers you want, the way you want them.
- ▶ Several additional analysis functions such as multi-year averaging and generation of NDVI data from NIR Images.
- ▶ Detailed Financial Tracking, mapping, and reporting to show you where you're making or losing money.
- ▶ Seamless compatibility with SMS Basic.

- ▶ Booklet Printing Module. This optional module allows you to build/save/print booklets that can contain reports, charts, analysis results, a cover page, a table of contents, and map layouts. All the outputs that you include in the booklet print/save as one output. This process automates a process that previously took many manual operations and manual setups. Unique booklets can be saved (by customer, for example) so that all outputs are customized.
- ▶ Project History button to the Projects dialog that allows you to see the history of interaction with a project.
- ▶ For network installations, supports a Project “check out” and “check in” functionality.
- ▶ For network installations, a new Import Project option allows you to import Projects that are created while you are disconnected from your server.
- ▶ Batch Delete function added to the Batch Commands.
- ▶ Backup Scheduling function that will automatically run the backup process at a set date and time.
